Clemens Tolboom, Martijn Braam

July 09, 2014

CONTENTS

1	Requirements	3
2	Install	5
3	Install Drupal	7
4	Switch to REST server mode	9
4.1	Run available tests	9
5	Switch to HAL server mode	11
5.1	Run available tests	11

Contents:

REQUIREMENTS

1. You should have a running [Drupal 8](#) install
2. You must have installed [Drush](#)
3. You need to know how to write [Drush aliases](#)
 - (a) `$ vi ~/.drush/drupal.aliases.drushrc.php`

INSTALL

- Checkout this REPO
- Copy the rest.config.dist to rest.config
- Edit rest.config and set DRUSH_ALIAS and URL to your system config.

INSTALL DRUPAL

The script installs Rest UI and Devel modules:

- Install Drupal on given alias and URL.
- Configures Drupal according to the ‘default’ intended settings.
- Next shows the config from Rest UI:

```
./rest.sh install-modules install config
```

SWITCH TO REST SERVER MODE

```
./rest.sh rest-set rest config
```

4.1 Run available tests

```
./rest.sh rest config node comment user
```

SWITCH TO HAL SERVER MODE

```
./rest.sh hal-set hal config
```

5.1 Run available tests

```
./rest.sh hal config node comment user
```
